

AMENDMENTS TO THE SPECIFICATION:

On page 11 before “**Detailed Description of Preferred Embodiments**” please insert the following new paragraph:

Brief Description of the Drawings

FIG. 1 shows an exemplary implementation of a spirit level vial.

On page 19, please amend the second paragraph to read:

FIG. 1 shows an exemplary implementation where a 1cc crimp cap type vial 1 with a standard 11mm fitting cap 3 made of optically clear glass 5 was used as the transparent vessel. The glass vial 5 was provided with an internal curvature radius of 10 inch radius. The crimp cap 3 was fitted with a Teflon separator 7 in order to provide complete compatibility with the organic liquid 9 (The vial 5 was coated internally by a Teflon solution EGC 1700 11 manufactured by 3M and then dried and placed in a 70°C oven for 20 minutes). The vial 5 was filled with 0.9 cc 1,2,3-trichloropropane 9 (supplied by Sigma). The vial 5 was then immersed upright beneath a colored solution comprising 10% methanol v/v%, a few grains of a water-soluble food dye (supplied by Rudo, Israel) and 90% water. The water/methanol/dye solution filled the remaining 0.1 cc empty volume of the vial 5 and while the vial 5 was submerged beneath said solution, it was crimped shut with a suitable crimper. Suitable markings 15 to state the level state of the water/methanol bubble 13 were etched on the external surface of the vial.
